

1 INTRODUCTION

1.1 Overveiw

In this project we creat the chat bot through which, one can saw the menu, special offer, and place the order.

1.2 Purpose

The purpose of this project that the anyone will able to saw and place the order remotely on their fevourite restuarant

2 LITERATURE SURVEY

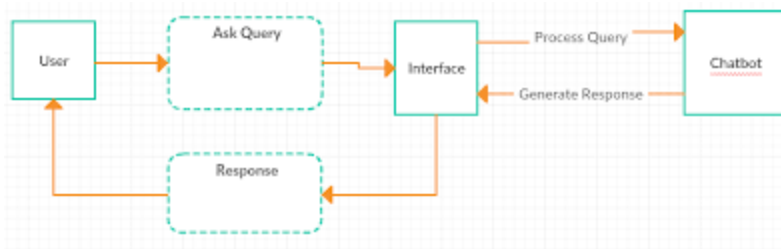

2.1 Existing problem

there are so many restuarant , where there is no restuarant chat bot so it a disadvantage for their sales .

2.2 they may form their own restuarant chat bot so their sales are increase.

3 THEORITICAL ANALYSIS

3.1 Block diagram

4 EXPERIMENTAL INVESTIGATIONS

In this project we creat IBM log in credential and through IBM watson assistant we creat the chat bot for restaurant . By which any one can get the information about the perticular restuarant. We made the node red file to interate the watson assistat .

5 RESULT

We get the result through this project is that the we can go any restuarant chat bot and see the special item and special offer for that items and menu card and all other features also.

6 ADVANTAGES AND DISADVANTAGES

Advantages : we can remotely saw the menu card .

we see the oofers and special item.

Place the order.

payment through UPI and other online payment system

Disadvantages : You should have the smart phone

Having internet connectivity.

7 CONCLUTION

We conclude that the smart restaurant chat bot is capable to do all things that a restaurant employee would do in a restaurant because it shows menu items, price, special items, special offer, discount, place the order, message confirmation, bills and all work that you do in a restaurant.
